

1. Which are the top three variables in your model which contribute most towards the probability of a lead getting converted?

Answer: The top three variables in my model which contribute the most towards the probability of a lead getting converted are:

- Lead Origin_Lead Add Form: 4.6119
- What is your current occupation_Working Professional: 3.7575
- What is your current occupation_Unemployed: 1.2613

2. What are the top 3 categorical/dummy variables in the model which should be focused the most on in order to increase the probability of lead conversion?

Answer: The top 3 categorical/dummy variables in the model which should be focused the most on in order to increase the probability of lead conversion are:

- Lead Origin_Lead Add Form: 4.6119
- What is your current occupation_Working Professional: 3.7575
 - We should develop tailored messaging and engage working professionals through communication channels based on their engagement impact.
- What is your current occupation_Unemployed: 1.2613
 - We should develop tailored messaging and engage Unemployed through communication channels based on their engagement impact.

3. X Education has a period of 2 months every year during which they hire some interns. The sales team, in particular, has around 10 interns allotted to them. So during this phase, they wish to make the lead conversion more aggressive. So they want almost all of the potential leads (i.e. the customers who have been predicted as 1 by the model) to be converted and hence, want to make phone calls to as much of such people as possible. Suggest a good strategy they should employ at this stage.

Answer: To make lead conversion more aggressive during the intern-hiring period, X Education can employ the following strategy based on the given variables and their coefficients:

Focus on leads with high potential: Based on the given coefficients, leads from the following sources have a higher likelihood of conversion:

- Lead Origin_Lead Add Form
- Unemployed

- Working Professional

Thus, the sales team should prioritize calling leads from these sources during the intern-hiring period.

4. Similarly, at times, the company reaches its target for a quarter before the deadline. During this time, the company wants the sales team to focus on some new work as well. So during this time, the company's aim is to not make phone calls unless it's extremely necessary, i.e. they want to minimize the rate of useless phone calls. Suggest a strategy they should employ at this stage.

Answer: To minimize the rate of useless phone calls when the company reaches its sales target for a quarter before the deadline, the sales team can employ the below strategy:

- Focus on lead nurturing activities such as personalized emails, SMS's and targeted newsletters.
- Sending automated SMS to customers that have a very good likelihood of getting converted.
- Collaborate with the sales team, management, and data scientists to fine-tune the model and gather feedback on what worked and what didn't.
- Make the strategy for providing discounts or incentives to potential customers to encourage them to take action.
- Focus on building relationships with potential customers through other communication channels like email, social media, or chatbots.
- Gather feedback from existing customers to improve the quality of the leads generated and optimize the conversion rate.
